

The Willis Tower

The Willis Tower (formerly the Sears Tower) in Chicago is one of the tallest structures in the World.

You are going to find out the pinnacle height of the Willis tower (starting from street level).

There are clues to help you written on cards.

- Deal out the cards
- Take it in turns to select one piece of information that you think is important and read it to the rest of the group
- You can write something down on the group's answer sheet but you must not show anyone any of your cards (even after you have read them out)
- As a group, try to get a sketch of the tower and then calculate its pinnacle height.

What is the least number of cards needed to solve the problem?
